

INTRODUCING THE NETWORK ASSURANCE ASSESSMENT FROM ADVIZEX: A Complimentary Offering to Keep Your Business Performing at Its Best.

Our Network Assurance Health Assessment is a no-fee, cloud-based service that assesses your network and application environment. When you rapidly expand your network to support remote workers, issues are bound to arise. Let's improve your user experience and ensure your network remains secure and reliable.

Signs of network struggle include:

- Login delays
- Timeouts
- Dropped sessions
- Applications not loading
- Frustrated users

Benefits of an optimized network include:

- Increases in performance
- Improvements in the end-user experience
- Dramatic increases in information exchange speed
- Higher degree of security
- Ability to troubleshoot problems more quickly

Network Assurance Assessment: How It Works

Our agnostic and unbiased approach helps ensure connectivity and eliminate potential network outages before your business is impacted. The assessment takes about 4 hours and includes:

- **Customer Interview:** Once you schedule the assessment, we interview the appropriate person to gather basic issue and network information.
- **Data Collection:** We use a "collector" to gather network data in the target area where you're experiencing issues. We always assess from the user's perspective to truly understand their experience.
- **Analysis:** We analyze your wired and wireless network environments.
- **Results:** We present your results and make recommendations to remediate the issues.

The assessment is independent, and data collection is isolated. No information is shared or maintained outside of the identified client point of contact.

Remediation

Advizex is here to assist you in remediation, if you wish. We offer additional services such as network monitoring-as-a-service and a Network Device Configuration and Performance Assessment.
